Memo To: Honsa Customers of Bio-Green Air Tool Lubricant

Honsa Ergonomic Technologies, Inc. Bio-Green air tool lubricant is an environmentally responsible lubricant that is formulated from renewable agricultural resources. It should be especially used where low toxicity and biodegradability properties are required. Honsa Tools Bio-Green has been evaluated and extensively tested as Biodegradable according to ASTM D-5864 Aerobic Aquatic Biodegradation of Lubricants (over 40 bio-studies have been performed), and when noted, are Ultimate Biodegradable Pw1, (ASTM's highest rating) and meet/exceed the acute toxicity (LC-50) criteria adopted by the U.S. Fish and Wildlife Service and the U.S. EPA. The bacterial microorganisms used in biodegradation tests are some of the simplest forms of life, and like all living organisms, are adversely affected by the presence of chemical toxins. The low toxicity of these biobased products is demonstrated by the microorganism's ability to multiply and biodegrade Honsa Tools Bio-Green in ASTM D-5864 biodegradation studies.

Thank you,

Thomas W Honsa
